

# Silicone Wristband Buying Guide

With endless design possibilities, this Silicone Wristband Buying Guide is intended to help you create your ideal silicone wristband. Check out our individual band descriptions and comparison grid below to find your favorite style today!

## PRINTED

- ✓ Using silkscreen technology, the message/artwork is printed directly on top of the silicone
- ✓ The ink is water and heat resistant
- ✓ The resulting design has a smooth and sleek finish

## DEBOSSSED

- ✓ Manufactured with a custom mold
- ✓ The text or logo is pressed into the silicone, reminiscent of a cookie-cutter
- ✓ The stamped design has a "sunken in" effect, giving the band dimension

## INK INJECTED

- ✓ A debossed design injected with a proprietary, durable ink
- ✓ The recession of the letters/artwork in the silicone acts as a cradle for the ink
- ✓ The depression of the inscription paired with the ink creates an impactful look that lasts an extended period of time

## COLOR COAT

- ✓ A two-tone wristband
- ✓ The customization will be etched into the exterior layer of the band, then filled with an ink color matching the interior of the band
- ✓ The final look is a striking contrast that displays the text vividly

## EMBOSSSED

- ✓ The customization is raised on the wristband's surface, making the band more tactile
- ✓ A 3-D, elevated design
- ✓ Text and graphics stand out since you can physically see and feel the dimension

## EMBOSSSED PRINTED

- ✓ An embossed message and/or logo with ink laid over top
- ✓ The raised personalization is printed with a single color ink using precise silk-screen technology
- ✓ The distinction between the raised design, glossy ink, and matte silicone, produces a bold look
